## Narrative

This report shows the number of uses of animals by each species. The information is also summarised by different categories of species.
It shows both the first, and all the subsequent uses, of the animals completed in the reporting period (unless either option is specifically excluded in the data filtering criteria when selecting the report).

The Data Provider reports allow the creation of standard (public) reports
-before the reports are available for the general public (i.e. non-published data), and
-including information on non-EU submissions (as a default) i.e. Member State specific national data e.g. on animals killed for tissue/organs - unless specifically excluded in the data filtering criteria when selecting the report.

Data filtering criteria has been complemented with an option to filter data into the report also at the level of species groupings
It should be remembered that by including one data filtering criterion, all others from that selection type are by default excluded. For example: if selecting "mouse" as the animal species, the data on the report will only show the results containing mice. However, if at the same time an incompatible selection is made e.g. selecting species grouping level 2 "birds" (excluding all other groups of species covering also "mammals" (including "mouse")), no data is shown in the report, as the two selections are incompatible.
